Discussion: Implementing ROCCA and TOGAF in Government Agencies

According to Anggraini, Binariswanto and Legowo (2019), merging the Roadmap for Cloud Computing Adoption (ROCCA) model with TOGAF 9.2 enables a government organisation to adopt cloud computing strategically. The ROCCA model is used to evaluate an organisation's readiness to move towards the cloud, to identify cloud adoption risks, and to establish cloud adoption requirements. TOGAF, on the other hand, provides a structured EA methodology that allows organisations to adopt cloud technologies based on their business needs. The authors applied their proposed framework to analyse and plan cloud adoption at SKK Migas in Indonesia.

The main advantage is that it allows government organisations to define their migration plan and consider security, legal compliance, and legacy IT. On the other hand, there may be some difficulties in the process due to the lack of cloud skills, budgetary constraints, and data protection issues. Agencies need to allocate time for training, involve stakeholders, and establish governance. In general, combining ROCCA and TOGAF can facilitate successful, secure and strategic change, if the framework is tailored to the requirements of each agency (Anggraini, Binariswanto and Legowo, 2019).
